Acme Grid
Demand-response software for commercial buildings
Seed round | Raising $3,000,000

The problem

Commercial buildings waste roughly 30% of their energy at peak load.

Facility managers have no automated way to shed load without hurting tenants.

We interviewed 12 facility managers across 9 property portfolios.

Market
TAM: $8.0B US commercial demand-response software and services.
SAM: $1.2B buildings above 50,000 sq ft in deregulated power markets.
SOM: $60M, built bottom-up from 4,000 target buildings at $15,000 per year.

Traction
ARR: $420,000 across 14 paying customers.
Monthly revenue growth: 9% over the last 6 months.
Net revenue retention: 112%. No customer has churned.

Team

A. Rao, CEO: 6 years at Tesla Energy on grid services products.

M. Iyer, CTO: built load-forecasting models at a regional utility.

Team of 7: 4 engineers, 1 data scientist, 1 sales, 1 operations.

Competition and moat
Competitors: Enel X, CPower, and in-house building-automation vendors.
Our advantage: a proprietary load-forecast model trained on 18 months of meter data.
Integrations with 3 building-management systems raise switching costs.

Financials and ask

Raising $3.0M seed. Gross margin 68%. Monthly burn $110,000. Runway today: 14 months. Use of funds: 55% engineering, 30% sales hires, 15% pilots in two new power markets.
